                               system.inc
@
                    Contains general system-level definitions
                        and definitions used by system.s
@
@
@ Description: Defines system-level constants, like TRUE or FALSE, and
             also defines constants used by system.s

@ Memory definitions
   .equ
        SRAM START,
                       0x20000000
         SRAM SIZE,
                        0x20000
   .equ
         DRAM START,
                       0x30000000
   .equ
         DRAM SIZE,
                       0x100000
   .equ
   .equ
         DRAM NUM ROWS, 1024
   .equ
        DRAM MILLIS PER REF, 256
         ROM_START, 0x8000000
   .equ
         ROM SIZE,
                       0x80000
   .equ
@ Stack definitions
@ top of the stack, usually the end of the external SRAM
         TOP STACK, 0x2001FFF0
@ interrupt stack size (see chapter 13 of the manual)
           IRQ STACK SIZE, 128
@ supervisor mode stack size (see chapter 13 of the manual)
   .equ SVC STACK SIZE, 128
@ General Definitions
        TRUE, 1
   .equ
         FALSE,
   .equ
@ System function definitions
   @ timer definitions
        SLCK CNT SEC,
                        32768
   .equ
        PIT INTERVAL,
                       33
                                  @SLCK ticks per PIT interrupt
   .equ
         \overline{\text{MILLIS}} IN SEC, 1000
   .equ
